## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

##### ***Input Format***

The input consists of an integer N, representing the number to be checked.

##### ***Output Format***

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

### ***Answer***

```
// You are using Java
import java.util.*;
class main
{
    public static void main(String arg[])
    {
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();
        int temp = n;
        int sum=0,digit=0;
        while(temp>0)
        {
            sum = sum+(temp%10);
            temp = temp/10;
            digit++;
        }
        if(digit==sum)
            System.out.printf("The number of digits in %d matches the sum of its
digits.\n",n);
        else
            System.out.printf("The number of digits in %d does not match the sum of
its digits.\n",n);
    }
}
```

**Status : Correct**

**Marks : 10/10**
